HACC

Hyperion Audit Control Center (HACC) is a web application designed for the comprehensive control, supervision, and inspection of electoral events.

Allows continuous monitoring of the operational process by capturing, processing and analysing data in real time, facilitating informed and timely decision-making, and strengthening transparency and traceability of the electoral process.

Modules

This web application allows for the monitoring of the electoral process, as well as the recording and monitoring of incidents in real time, facilitating the detection and prevention of possible irregularities.

Learn about its modules:

Audit

Allows you to record incidents, findings, and field surveys, as well as manage inspections, tasks, and auditor credentials.

Dashboards

Features a control panel with real-time visualization of incidents and key metrics: open and closed audits, auditor performance, and response times.

Reports

Generate and consult consolidated reports on incidents, findings, inspections, tasks, and field study results.

Administration

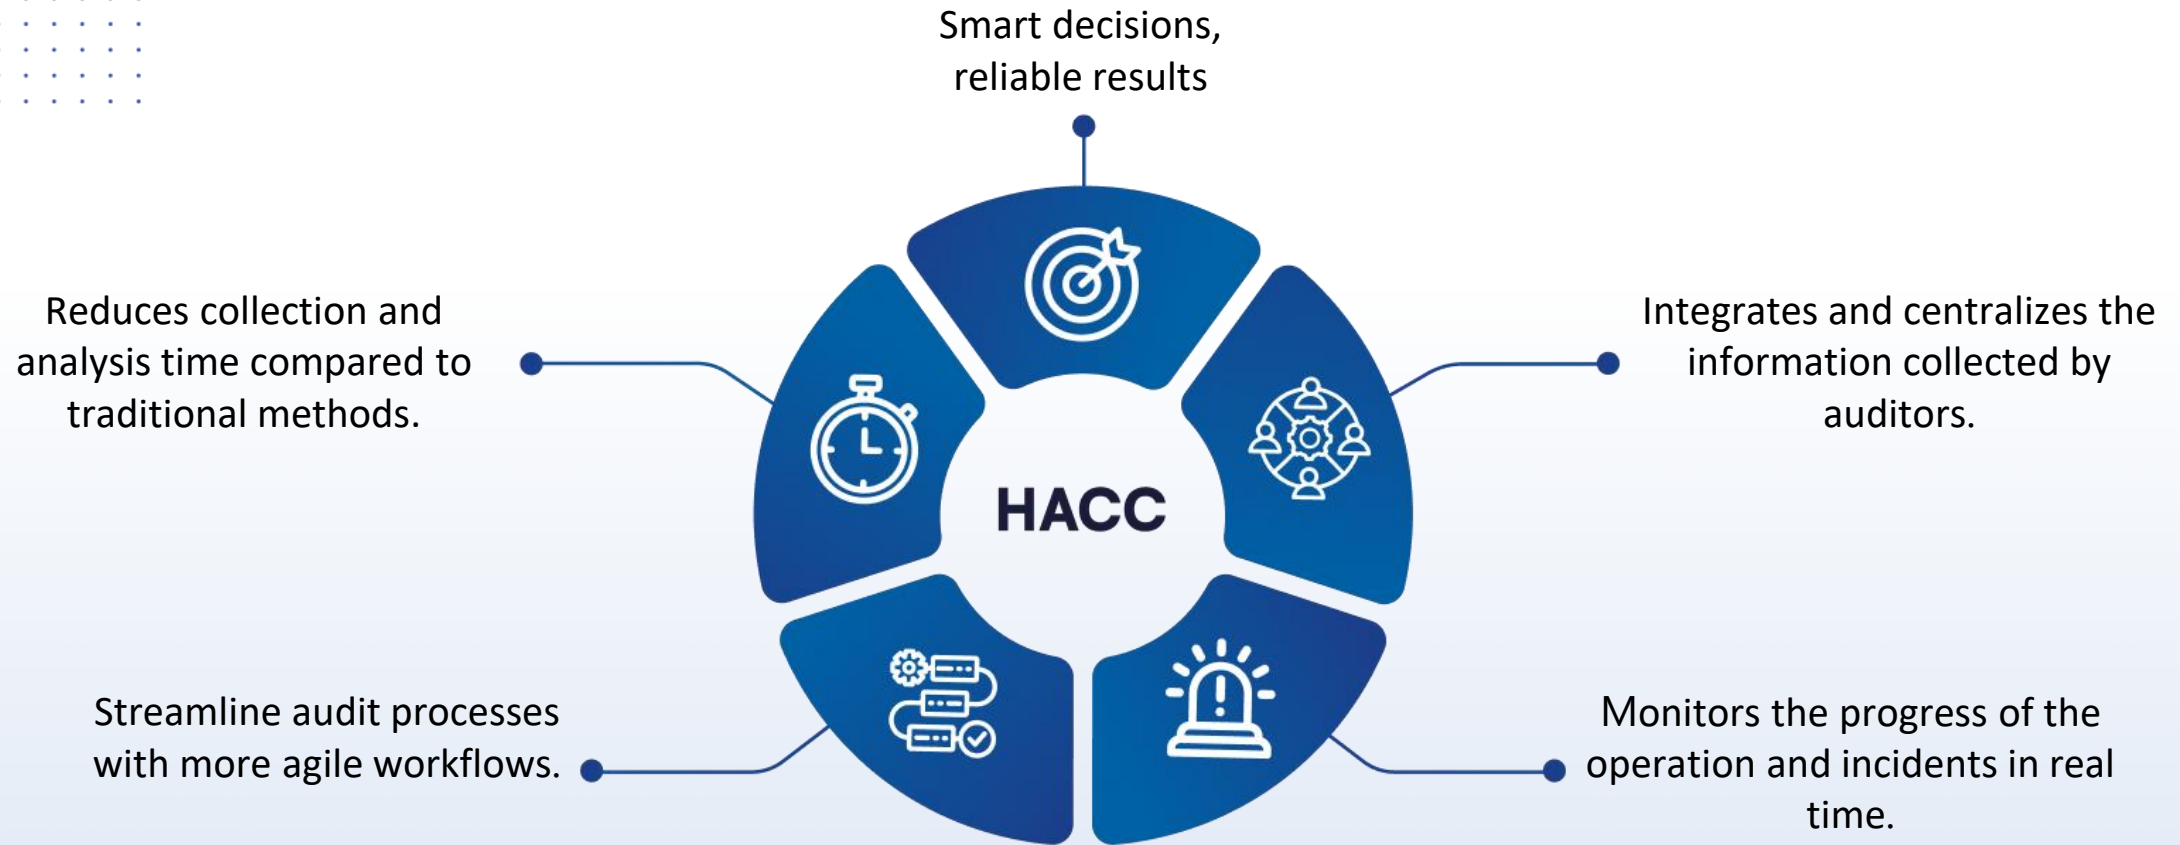

Comprehensive resource management and planning of inspection events, tasks, and field studies

Security

Allows for the administration of users and profiles according to roles, ensuring controlled access and traceability within the audit process.

How does HACCC enhance the transparency and efficiency of your event?

How does it work?

Operational monitoring:

Monitor each stage of the electoral process in real time, with a clear, centralized view that lets you know what is happening, where, and when. Maintain operational control from start to finish.

Detection and Prevention:

Records incidents, generates indicators that support decision-making and active preventive actions to ensure a safe and transparent electoral process.
